

About BALTIC TRANSPORT OUTLOOK 2030 (BTO)

Baltic Transport Outlook 2030 is a project for the future transport system in the Baltic Sea Region, targeted at decision-makers in transport and logistics.

Contracted by the transport ministries of all countries in the Baltic Sea Region and attended by the European Commission, the project will show challenges and possibilities of the transport system in the Baltic Sea Region. The core of the project is a study that will map the transport infrastructure in the Baltic Sea Region and the flows of goods and passengers - between the countries in the region and between the region and other areas. The study will present scenarios for developments until 2030 and recommendations to managers of the Baltic Sea Region Transport System. The project is a strategic priority of the Baltic Sea Strategy that was adopted by the European Council in October 2009 and it was initiated by the Swedish government.

18 March 2011 the second BTO workshop will be held in Schwerin, Germany. This event provides a unique possibility to discuss the content of the project, in particular the scenarios for the future development of the Baltic Sea transport system. The purpose is to anchor the whole BTO process with a broader group of stakeholders (public as well private) in the Baltic Sea transport system and get input to the upcoming SWOT analysis that will be the basis for recommendations to decision makers in the Baltic Transport System.
